The undersigned company is a rural telephone company that received a memorandum dated August 29, 2003 together with an attached invoice from APCC Services, Inc. on behalf of various Payphone Service Providers ("PSPs") that referenced the Federal Communications Commission decision from October, 2002 addressing compensation obligations to PSPs.

When dial around calls and subscriber toll-free calls are made from payphones located in the Company's service area, we automatically route those calls from our central office to the toll provider (the Regional Bell Operating Company or other Interexchange Carrier) assigned the access code or the 8XX number being dialed. This automatic routing is triggered by the end user dialing a "1" and occurs even where the call is ultimately terminated to an end user located within our service area. Once routed to the toll provider, however, the toll provider controls the routing of the call and how that call will be terminated. Unlike the regional Bell Operating Company, our company is not an intraLATA toll provider.

Accordingly, when calls are made from any pay station in our service area, it is not possible for our company to handle a call that is compensable. Unlike the regional Bell Operating Companies or other local exchange carriers that provide intraLATA services on a compensable basis, our company provides only originating access service to other carriers. With respect to the traffic associated with the invoice received from APCC, we conclude that the compensable calls were handled by the intraLATA toll provider that is assigned to the paystation; no compensable calls were handled by our company.

With respect to the traffic associated with the invoice received from APCC, we conclude that the compensable calls were handled by the intraLATA toll provider that is assigned to the paystation; no compensable calls were handled by our company.

MADISON RIVER

The undersigned company is a rural telephone company that received a memorandum dated August 29, 2003 together with an attached invoice from APCC Services, Inc. on behalf of various Payphone Service Providers ("PSPs") that referenced the Federal Communications Commission decision from October, 2002 addressing compensation obligations to PSPs.

When dial around calls and subscriber toll-free calls are made from payphones located in the Company's service area, we automatically route those calls from our central office to the toll provider (the Regional Bell Operating Company or other Interexchange Carrier) assigned the access code or the 8XX number being dialed. This automatic routing is triggered by the end user dialing a "1" and occurs even where the call is ultimately terminated to an end user located within our service area. Once routed to the toll provider, however, the toll provider controls the routing of the call and how that call will be terminated. Unlike the regional Bell Operating Company, our company is not an intraLATA toll provider.

Accordingly, when calls are made from any pay station in our service area, it is not possible for our company to handle a call that is compensable. Unlike the regional Bell Operating Companies or other local exchange carriers that provide intraLATA services on a compensable basis, our company provides only originating access service to other carriers. With respect to the traffic associated with the invoice received from APCC, we conclude that the compensable calls were handled by the intraLATA toll provider that is assigned to the paystation; no compensable calls were handled by our company.
